

All cable tray hangers

Overview

TechLine Mfg. offers various supports for its Snap Track products including hangers, brackets and clamps.

Key Takeaways

Cable tray hangers come in various types including stand-off brackets, G hanger supports, and trapeze supports, each designed for specific mounting and load requirements. Common Types of Cable Tray Hangers¹.

Stand-

Off Brackets Stand-off brackets are used to mount cable trays or baskets at a specific distance from walls or surfaces. They provide clearance for airflow, maintenance, and cable routing. Sizes typically range from 50mm to 300mm, and they are made from pre-galvanized steel, hot-dipped galvanized steel, or stainless steel for corrosion resistance and durability.

2. G Hanger Support Brackets G hanger supports are designed for overhead mounting of cable trays, trunking, or baskets. They are heavy-duty, rigid, and easy to install, with common sizes including 100mm and 150mm.

These hangers are ideal for ceiling installations where the tray needs to be suspended securely. **3. Trapeze Support Brackets** Trapeze supports consist of a horizontal bar suspended from the ceiling with vertical rods, forming a trapeze-like structure.

They are pre-assembled for quick installation and can support multiple cable trays or wider trays with varying drop lengths. Typical widths include 100mm and 150mm with drop lengths up to 500mm. Other Support Considerations Pre-Cut Rods: Rods cut to size before installation save time and reduce on-site labor, ensuring a safer and faster setup.

Beam Clamps: Used to attach hangers to steel beams without drilling, preserving structural integrity. Lock Nuts: Recommended in environments with vibration to prevent loosening over time.

Material and Corrosion Protection

Cable tray hangers are typically made from steel or stainless steel, with finishes such as hot-dip galvanization, epoxy coating, or stainless steel grades (A316/A4) to resist corrosion in wet or industrial environments. Proper material selection ensures long-term durability and compliance with standards like IEC 61537, NEMA VE 2, and NEC.

Installation Guidelines

Support spacing is generally 1.5 to 2 meters, with closer spacing for heavier cable loads. Hangers can be mounted on ceilings, walls, or floors, depending on the system design and site conditions.

Compatibility with existing cable tray systems is important; using components of the same brand or size simplifies installation and inspection. By selecting the appropriate type of hanger and material, electrical installations can achieve safe, durable, and efficient cable management across industrial, commercial, and data center environments.
