

Cable tray elbow flexible joint

Overview

The flexible elbow for FTE50 cable trays in FRP material makes it easy to create horizontal direction changes on the tray's span. You simply form it by hand in any angle from 0-90°. These cable tray fittings and accessories are essential for the seamless installation of an integrated cable management. The cable tray system KP (manufactured by pultrusion) provides maximum flexibility and efficiency and a support distance of up to 4 m. Its quickly assembly with clip in jointing pieces without screws included automatically an expansion joint, greatly facilitates its installation. In addition, it can be used to create side steps. The design of our SPB-RF Flexi Elbows has been updated in order to improve flexibility, ease of fitting and to standardize the design across the full range of cable tray heights and materials.
