

# Does the front door have an electrical box and a fiber optic box

## Overview

Identify the telecom box on your house. Learn its name, its essential role as the service boundary, and its safety features.

## Key Takeaways

Yes, many homes with fiber optic broadband have a small external box near the front door, often called a junction box, and an internal box called an ONT that requires a power connection.

## External Box

A junction box is typically installed on the outside of the property, often near the front door or another accessible exterior wall. This box houses the incoming fiber optic cable and serves as the entry point for the fiber network into your home. It is usually small, about the size of a mini-tablet, and does not require a direct electrical connection itself, as it primarily functions as a protective enclosure for the fiber cable.

**Internal Box (ONT)** Inside the home, the fiber cable from the external box connects to an Optical Network Terminal (ONT).

## The ONT

The ONT converts the optical signal into an electrical signal that can be used by your router and other devices.

## The ON

T must be plugged into a power socket, so it requires electricity to operate. Its location is often chosen for convenience, such as near where your router or TV equipment is situated, rather than strictly near the front door.

## Connection to Home Network

From the ONT, a standard Ethernet cable or sometimes coaxial cable runs to your router, which then distributes internet access throughout the home. The fiber cable itself is very thin and flexible, allowing it to be routed through walls, ceilings, or conduits with minimal disruption.

## Summary

Front door/exterior: Small junction box for fiber entry, no direct power needed. Inside the home: ONT box connected to power, converts fiber signal to electrical signal for your router. Router connection: Ethernet or coaxial cable from ONT to router for internet distribution.

This setup ensures that the fiber optic signal is protected outside while providing a functional connection point inside the home for your network devices.
