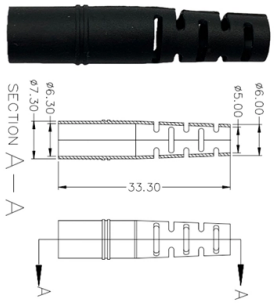
Guatemalan Galvanized Cable Tray Specifications



Overview

What are Galvanized Cable Trays? They are a type of cable support system manufactured from steel sheets coated with a zinc layer through a hot-dip galvanization process.

Key Takeaways

Standard galvanized cable trays in Guatemala are typically available in lengths of 2500mm (2. 5 meters) and 3000mm (3 meters), with options for customization based on project requirements.

Standard Lengths

Most manufacturers and suppliers in Guatemala offer hot-dip galvanized steel cable trays in standard lengths of 2. 5 meters and 3 meters. These lengths are widely used in industrial, commercial, and infrastructure projects for efficient cable management and ease of installation.

Customization Options

In addition to standard sizes, many suppliers, such as Brilltech Engineers, provide customizable lengths and dimensions to meet specific project needs. This allows for tailored solutions in complex installations, including ladder, perforated, and raceway cable trays.

Material and Durability

Galvanized cable trays in Guatemala are typically made from high-grade steel with a zinc coating applied through hot-dip galvanization. This ensures corrosion resistance, long-lasting performance, and suitability for harsh environments, including outdoor and industrial settings.

Applications

These cable trays are used extensively in: Electrical installations in buildings and factoriesPower plants and industrial facilitiesCommunication rooms and data centers The trays are designed for quick installation, proper ventilation, and cable protection, making them a reliable choice for both standard and customized projects.

Summary

For projects in Guatemala, you can expect standard galvanized cable tray lengths of 2. 5m and 3m, with the possibility of custom lengths depending on supplier capabilities. Always confirm with the manufacturer or supplier to ensure the trays meet your specific load, environment, and installation requirements.
