

Libya buys electrical distribution boxes

Overview

AAM CO,LTDTThrough it, it provides low-voltage electricity distribution boxes with international specifications. The Advanced Manara Company has maintenance.

Key Takeaways

Libya sources electrical distribution boxes from local manufacturers and suppliers, with recent government initiatives distributing equipment to address power outages.

Local Manufacturers and Suppliers

Several Libyan companies specialize in producing and supplying electrical distribution equipment: Electrical Industries Company (EICO): Located in Sidi Al-Sayeh Bir Diab, EICO manufactures electrical distribution transformers ranging from 50 kVA to 2000 kVA, as well as 20 kVA power transformers. The company has been a primary supplier to the General Electricity Company of Libya (GECOL) since 2006, providing products that support the public electricity network. Corina Company: Established in Benghazi in 2010, Corina provides design, supply, installation, and after-sales services for electrical and mechanical systems.

The company operates across major Libyan cities and collaborates with international partners to deliver high-quality electrical solutions.

AI

Fath Al Dahabia Co.: Founded in 1989 and renamed in 2011, this company imports and sells electrical power components, including low and medium voltage equipment, contractors, relays, and circuit breakers. It also designs substations, networks, and control panels, and supervises installation projects across Libya. Altazamon Company: Established in 1998, Altazamon specializes in engineering and assembly of electrical panels.

It is a trusted supplier for GECOL and provides tailored distribution solutions, working closely with local and international partners to meet Libya's electricity sector needs.

Government Distribution Initiatives

The Electricity Crisis Committee, led by Engineer Belqasim Haftar, has recently begun distributing electrical equipment, including distribution boxes, to regions experiencing urgent power outages. Initial shipments have been sent to Benghazi, Tobruk, Bayda, and southern cities, prioritizing areas with the most critical electricity shortages. This initiative is part of a broader plan to gradually restore continuous power supply for citizens.

Summary

Libya relies on a combination of local manufacturing and government-led distribution programs to procure and deploy electrical distribution boxes. Key suppliers like EICO, Corina, AlFath Al Dahabia, and Altazamon provide both equipment and technical services, while government initiatives ensure that critical regions receive necessary electrical infrastructure to address outages and improve the reliability of the national grid.
