

Syrian KVM Fiber Optic Manufacturer

Overview

BARQ NET FTTP Syrian Telecom has a license to operate FWA in Frequency Band 3.6-3.7 GHz, which will be utilized in this operation. Fiber optic cable specif.

Key Takeaways

Syria currently does not have publicly listed manufacturers of fiber optic cables or KVM equipment, relying instead on international suppliers and local contractors for infrastructure deployment.

Fiber Optic Manufacturing in Syria

There are no registered Syrian companies producing fiber optic cables according to global manufacturer directories, indicating that domestic production is minimal or non-existent (World of Manufacturers). Syria's national fiber initiatives, such as BARQ NET FTTP, involve deploying fiber-to-the-premises infrastructure across all 14 governorates, but the project specifies that equipment must come from Tier I global vendors, while local companies are primarily contracted for civil works and installation. This suggests that Syria's fiber optic hardware is imported, while local expertise is leveraged for deployment and maintenance.

KVM Equipment

Similarly, there is no evidence of Syrian-based KVM (keyboard, video, mouse) hardware manufacturers.

KV

M solutions are typically part of the active network infrastructure, which BARQ NET and SilkLink projects require to be sourced from international Tier I suppliers to ensure compliance with ITU-T standards, network reliability, and cybersecurity protocols. Local companies may assist with installation and integration, but production of KVM switches or related hardware is not documented.

National Fiber Projects and Opportunities

Syria is actively expanding its digital infrastructure through projects like BARQ NET and SilkLink, aiming to connect homes, businesses, and rural areas with high-speed fiber-optic internet. These projects operate under public-private partnerships, inviting both domestic and international companies to participate in deployment, operation, and maintenance. While local companies can bid for civil works and network support contracts, the manufacturing of fiber optic cables and KVM equipment remains dependent on foreign suppliers.

Implications

For procurement: Organizations seeking fiber optic or KVM hardware in Syria will need to source from international vendors. For local companies: Opportunities exist in civil engineering, installation, and network operations rather than manufacturing. For investors: Developing local manufacturing capabilities could fill a gap in Syria's telecom supply chain, but would require significant investment in technology and workforce training.

In summary, Syria currently lacks domestic KVM and fiber optic manufacturers, relying on imported equipment for its national fiber projects, while local companies contribute to deployment and civil works.
